

Touch / Interactivity

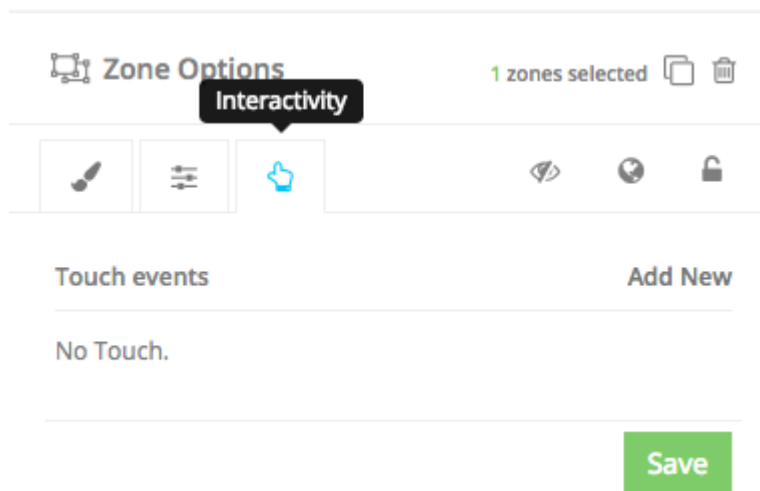

- [Creating Interactive Touch Content](#)

Creating Interactive Touch Content

Touch Events or Interactions can be added to Pages, Zones and individual content items to build interactive layout content in the embed signage builder.

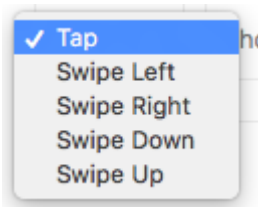

Zones:

On a zone to add touch interactions you need to select the 'Interactivity' tab on the Zone Options panel

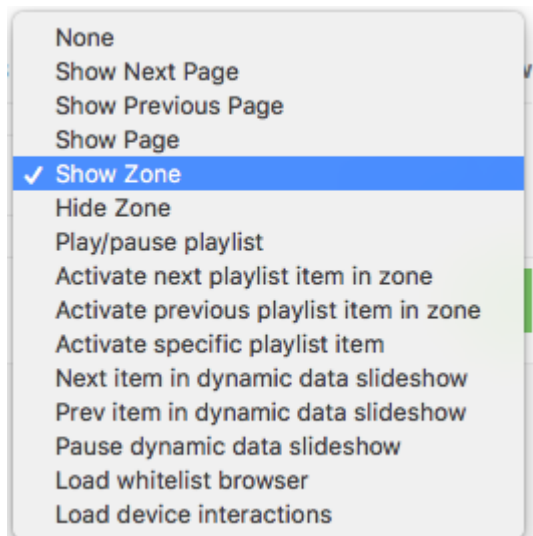

To add an event, click the add new button. You will then have a touch event added which you can configure. The first part to configure is:

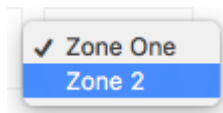

- Gesture - What type of touch the user will use to activate the event. Tap the zone or Swipe Left, Right Up or Down on the zone

- Action - Choose what you want to happen when touched. Things like the show or hide pages, zones or playlist items. Also, trigger functions from within plugins such as Dynamic data

- Target - what you want the event to affect for example a specific page, zone or content item

You can also add more than one touch event to a zone - this means you can carry out multiple actions from a single touch on a zone or perform different actions based on different gestures... very useful when swiping.

Touch events

Add New

Tap ▼	Show ▼	Zone : ▼	Remove
Tap ▼	Play/p ▼	Zone : ▼	Remove
Tap ▼	Show ▼	First P ▼	Remove

Save

Pages:

In the Page Options panel, select the interactivity tab for the page you want to add touch event(s) to.

General
Interactivity
1 Page(s) selected.

Name
First Page

Much like zones, you can then add touch events or multiple events to the page and configure the gesture, action and target.

Interactivity

1 Page(s) selected.

Zone Playlist Items:

As with pages and zones, you can also add touch events to specific playlist items. To do this enter the zone playlist and click on either:

The Touch section of the playlist item...
